

ABSTRACT

Learning Analysis of Physical Education Sports and Health During the 2020-2021 Pandemic and 2021-2022 Endemic at SMK Al-Hidayah Arjasa

Keywords: Learning, Pandemic And Endemic

Learning is a process and our effort to develop knowledge and all the potentials that are embedded in humans, both cognitive, affective and psychomotor potentials.

This study aims to find out what sports and health physical education learning is like during the 2020-2021 pandemic and endemic 2021-2022 at SMK AL-HIDAYAH ARJASA VOCATIONAL SCHOOL and analyze the obstacles that occur when implementing educational learningsport and health during the 2020-2021 pandemic and endemic period of 2021-2022 at SMK AL-HIDAYAH ARJASA VOCATIONAL SCHOOL. The method in this study I used qualitative research methods, I took the research subject at Al-Hidayah Arjasa Sumenep Vocational School, precisely in Kangean Island, my data collection used several processes such as observation, interviews, documentation. The data analysis that I did collected things related to learning during the pandemic and endemic times of SMK Al-Hidayah Arjasa Vocational School, then I summarized the results of the research so that they are easy to understand.

Halis, from the research that I did, I can conclude that learning during the pandemic was indeed applied online or better known as distance learning, in this learning students study at their homeseach with the help of a phone, kouta, signal or network. If learning during the endemic period was applied face-to-face, it means that during the pandemic all students and students have returned to study at school but must comply with strict rules complying with health protocols such as wearing masks, keeping a distance and washing hands.
