

ABSTRACT

Planet Education (Planetion) Learning Media Development Based on Adobe Flash Cs6 On Learning IPAS Class VI SDN Pangarangan I Sumenep. Bisma Nurillah Manahim.

Keywords: Adobe Flash CS 6, Characteristics of Planets in the Solar System, Planet Education, ADDIE Development

The purpose of this study is to create an engaging learning media product for class VI that teaches about the traits of planets in the solar system using Adobe Flash CS6. This product should be a valid, useful, and effective way to learn. Research and development (R&D) is used as a method, and the ADDIE paradigm is used as the model for growth. The score for material validation was 97%, and the score for media validation was 88%. The teacher response questionnaire got a score of 97% for usefulness, while the student response questionnaire got a score of 92%. The success figures that were based on the answers to the students' post-test questions got a score of 90. So, we can say that using Adobe Flash CS6 to make planetion media and teaching information about the features of planets in the solar system to sixth-graders is a great way to teach.
