

ABSTRACT

The influence of waste management project pepetarsau on caring fish

Phase C student environment at SDN Koler 2

Keywords: Waste management project, caring attitude

This research aims to determine the influence of waste management projects on environmental care attitudes of phase C students at SDN Kolor 2 Huzusaya in class VI. The technique used in this research is correlation bending to determine the direction of the data collection that will be carried out in this research using questionnaire method. In the questionnaire method, a questionnaire is used as a data collection tool which will previously be tested for validity and reliability

The results of the research show that the implementation of waste management projects has an effect on the environmental care attitude of phase C students at SDN Kolor 2. This can be seen based on the results of research data analysis using a test with a coefficient of determination, namely a value of 3.193 with Sig. 0.005 0.05 and Adjusted R. square obtained 30.5%. With this, there is an influence of determining waste management projects on people who care about the environment
