This study focuses on the description of Javanese phonological interference into Indonesian based on Javanese interference in the state speech of the President of the Republic of Indonesia. This study uses a descriptive qualitative approach that expresses findings by describing phonologically the data obtained. The theory used in this study is sociolinguistic theory. The data collection method in this study uses free involvement of the data, namely data is tapped, recorded and transcribed phonetically. At the data analysis stage, the matching method was used, because the determining tool of this study used the articulation phonetic method. The technique used is the determinant element sorting technique (PUP).

The result of this study was the discovery of 42 data, phonological interference in the pronunciation of vowel sounds was 2 data and changes in the pronunciation of consonant sounds were 40 data. In this study, it is more dominating on the change in the pronunciation of the consonant sound of the bilabial explosion inhibitor influenced by the Javanese language which has the aspiration feature [h] to the aspiration of the bilabial explosion inhibitor.
