

Abstract

The covid 19th plague across the world has had significant impact on human life in all areas of life. Governments seek to counter the plague in various ways, one way or another, by implementing social policy of distancing, affecting learning activities that require students to learn from home to follow online learning patterns. The study was intended to know the perceptions of the muhammadiyah high school student 1 sumenep of physical education and online sports.

The study involves a qualitative approach with structured interview techniques. The structured interview involved is to spread several questions according to the focus of research through the Google application form. The subject of this study was the 1 sumenep muhammadiyah high school student, the data analysis used was the data analysis developed by miles huberman.

Studies show that the majority of students have a negative perception of online physical education and sports. This is because the fact that the majority of students do not understand the material of physical education and online sports presented by the teacher, oral transmission of material is considered less attractive, and students' opinions about online learning are less effective.
