

ABSTRAK

Tolak adi, 2021. Analisis penerapan pembelajaran model problem based learning terhadap materi pembelajaran bolavoli di Mts MATHLABUL ULUM tahun 2020-2021. Dosen pembimbing I: Dr. Achmad Suparto, M.Pd. Dosen pembimbing II: Dyas Andry Prasetyo, M.Pd.

The process of analyzing the application of problem based learning model learning to volleyball learning materials at MTS Mathlabul Ulum for the academic year 2020-2021 and this researcher aims to describe the problem based learning model learning used by teachers in the teaching and learning process, and to find out the impact of the effectiveness of using learning models *problem based learning* Mts MATHLABUL ULUM.

The research method used is qualitative, by developing research instruments, observations, interviews and documents and all of that is done by researchers

The results showed that students were more interested in learning sports, especially volleyball than those who had not previously applied the problem based learning model. This shows that the teacher is trying really hard in this case to increase student interest in learning volleyball at Mts MATHLABUL ULUM.

Sports learning, although sometimes it is seen as easy by teachers who are powerful in other lessons and also learning that is much liked by students, is also seen as necessary to determine the learning method that will be used by an educator and how students also play a role in learning, for example, such as learning methods taken by researchers, so that they can empower students to think creatively and critically moreover to form independent, responsible and skilled characters
