

Abstract

Keywords: audio visual learning, passing down volleyball game

The importance of sport is in harmony with economics, art and other fields of human life. The growth of sports that is growing rapidly today with a diversity of characteristics found in each sport, like to get a complete definition. Physical education aims to develop physical and spiritual aspects, in order to fully develop humans.

The purpose of this study is to find out the significant differences between the direct learning model and the audio visual learning model of the material under the volleyball game. And to find out the contribution of increasing learning outcomes between the direct learning model and the audio visual learning model under the volleyball game

This type of research the author uses the method of arrangement with the pattern of matched by desing subject or in brief M-S. This is based on the opinion of "Matching Subjects" which of course also means grub Matching because in essence the Matching Subject is such that the separation of the pairings of subjects (Pairofsububub) respectively to the performance grub and control will automatically balance the two grubs
