**Kata Kunci :** Motivasi dan Ekstrakurikuler Futsal

In this study, the type of study is a descriptive study, the research further highlight aspects of the descriptive analysis of the results of research data source is the observation, observation and questionnaire results. Source of data derived from primary data and secondary data. Primary data derived from the results of the questionnaire with Likert swkala, while secondary data derived from observations. Data analysis method used is the Kolmogorov-Smirnov test validity, validity, reliability and percentages. From the analysis keajekan and validity of data from a population of 45 people sebayak whole grains are considered valid statement as much as 16 statement.

Based on the results of research that researchers do, it turns out the participation of students of SMAN 2 futsal Sumenep in extracurricular activities is significant. This is evident from their motivation both intrinsic factors and extrinsic factors. However, from the results of data analysis using SPSS version 22 factors extrinsic motivation is more dominant than the intrinsic factor. Proved that there is 27.95% voted in favor and 21.21% who chose not agree. These factors supported by indicators of support from family and culture as well as the motivation for achievement to be achieved and self-satisfaction. This research is expected to result students were able to identify psychological factors that exist in itself, so as to improve the quality of the game of futsal good premises.
