

ABSTRACT

SMKN 1 Sumenep has never changed, namely wanting to give pride to the school through improving the quality of students who are trained and developed from an early age, by participating in this volleyball extracurricular, SMKN 1 Sumenep has a pretty good achievement by participating in competitions between SMA/SMK equals. During this pandemic period, it greatly affects students, limited time results in less than optimal practice. The study was conducted to determine the factors that influence students' interest in participating in volleyball extracurricular activities during the pandemic

The population in this study were students of SMKN 1 Sumenep which included volleyball extracurricular teachers. The sampling technique used is purposive sampling which includes 1 extra teacher and 10 students. This type of research is qualitative with descriptive methods and data collection techniques in this study are observation, interviews and documentation.

The research that has been done by the researcher gets the result that the extra teacher has carried out his duties as the extra teacher. Students already have motivation in volleyball extracurricular exercises.

The conclusion that can be given by the researcher is that the most influential external factor in participating in this volleyball extracurricular which includes a supportive school environment and socialization between friends who can influence, and also extra teachers who are committed to being the key to successful achievement, facilities and infrastructure are very adequate.

Keywords: students interest in participating in volleyball extracurricular.
